For information regarding specific Capital Projects Division efforts, please see the Capital Projects Listing or visit the Capital Projects GIS map.

The Capital Projects team is responsible for the construction of capital improvement projects for the City of Sunrise.

Each project is assigned to a Project Manager who represents the City at project meetings and serves as the on-site representative. A Project Manager coordinates all aspects of design, bidding, construction and post-construction maintenance with the Architect/Engineer of record. During construction, a Project Manager administers the construction contract, monitors progress, addresses construction-related issues, maintains payment records, monitors project budgets, and processes all other documents required to close out projects.

Only funded projects within the city boundaries are presented.
